

STAT-TIQUE

A HOW-TO ON CRITICAL ANALYSIS OF LITERARY STATISTICS FOR STUDENTS

INCLUDING PRACTICE EXERCISES

A sample size of 40 females were selected from Clinic X. Patients were randomly assigned to either exercise program A or B. The independent test was performed to detect differences between the two groups with respect to weight loss and body mass index. There is a statistically significant difference between the two programs. A sample size of 40 females were selected from Clinic X. Patients were randomly assigned to either exercise program A or B. The independent test was performed to detect differences between the two groups with respect to weight loss and body mass index. There is a statistically significant difference between the two programs.
